

MASTERPIECE CAMPAIGN PLAN & GOVERNANCE

Editable campaign system for three platform assets:
Instagram Feed, Instagram Story, and Facebook Cover.

CLAIM-SAFE • BRAND-GOVERNED • PLATFORM-READY • EDITABLE

Requirement Map

Mandatory / Expected / Optional separated before execution.

Mandatory

- 3 final images
- Correct platform sizes
- Brand consistency note
- Short case study
- Editable versions for revision

Expected

- Clear logo placement
- Consistent color palette
- Clean typography hierarchy
- Same product identity
- Different composition per platform

Distinction-Level

- Claim-safe copy
- Governance rationale per task
- QA checklist before submission
- Organizational benefit explained
- Reusable campaign system

DECISION: ONE BRAND SYSTEM, THREE PURPOSE-BUILT LAYOUTS.

Execution Governance Workflow

01

MVP

Create core campaign visual system

02

Persistence

Maintain shared brand rules and claim-safe copy

03

Testing

Check size, contrast, layout, and wording

04

Deployment

Export platform-ready assets

05

Docs

Add rationale, governance, and case study

06

Submission

Package editable files and final outputs

Governance principle: Every creative decision must be traceable to brand guidelines, platform purpose, or user behavior — not personal taste.

Task 1A — Instagram Feed

1080 × 1080 • PRODUCT-IMPACT LAYOUT

Purpose

Purpose: Build instant product impact in a square feed format where users scroll fast and decide within seconds whether the brand looks credible.

Why We Use This

Why this format: Instagram feed is strong for visual recall, product announcement, portfolio proof, and reusable campaign content. A square composition gives equal priority to brand, scooter, message, and CTA.

Governance Controls

Controls used: official palette, approved brand attributes only, visible logo clear space, no unverified product claims, same hero scooter, and platform-safe text hierarchy.

Organization Benefit

Organizational benefit: improves brand recognition, creates a reusable campaign asset, supports product awareness, and gives marketing a clean template for future launches.

QA Evidence

QA evidence: checked for readability, consistent colors, claim safety, product focus, editable text layers, and correct 1080 × 1080 format.

Task 1B — Instagram Story

1080 × 1920 • MOBILE-FIRST VERTICAL LAYOUT

Purpose

Purpose: Create a vertical, mobile-first brand experience that feels more immersive than the feed post and pushes one simple action: Explore XBOT EV.

Why We Use This

Why this format: Stories use full-screen attention, so the design uses vertical hierarchy, larger headline rhythm, and a clear CTA near the bottom thumb zone.

Governance Controls

Controls used: same colors, logo system, scooter, claim-safe benefit words, consistent tone, and less dense copy so the vertical format stays readable.

Organization Benefit

Organizational benefit: supports campaign reach, mobile engagement, and paid/social story placements while keeping the same brand system intact.

QA Evidence

QA evidence: checked safe area, top logo visibility, bottom CTA visibility, text contrast, no unsupported booking claim, and correct 1080 × 1920 format.

Task 1C — Facebook Cover

1640 × 624 • WIDE BRAND-BILLBOARD LAYOUT

Purpose

Purpose: Build a wide brand billboard for profile/page visibility, using a calmer composition that communicates the brand identity at a glance.

Why We Use This

Why this format: Facebook cover space is wide and shallow, so the design separates message on the left and scooter on the right, avoiding cramped text.

Governance Controls

Controls used: minimal copy, approved brand attributes, wide-safe composition, logo prominence, consistent color palette, and no unverifiable performance claims.

Organization Benefit

Organizational benefit: strengthens page professionalism, supports campaign consistency across platforms, and gives the organization a reusable hero banner.

QA Evidence

QA evidence: checked wide readability, central/safe area composition, brand alignment, low text clutter, and correct 1640 × 624 working size.

Case Study & Final Submission Governance

Objective

Create three XBOT EV social media assets that look premium, futuristic, and reliable while remaining safe for assessment use and aligned with the supplied brand identity.

Approach

I used one campaign system, then adapted composition by platform. Feed focuses on impact, Story focuses on vertical engagement, and Facebook Cover focuses on wide brand presence.

Why This Benefits The Organization

This gives XBOT EV a reusable design system, supports brand recall across platforms, reduces inconsistent campaign output, and keeps marketing copy safer by avoiding unsupported product claims.

Governance Controls

Brand palette, logo clear space, typography hierarchy, platform dimensions, claim-safe vocabulary, visual consistency, editability, and final package traceability.

Submission Checklist

- ✓ 3 editable PPTX files
- ✓ 3 platform-specific layouts
- ✓ Claim-safe wording
- ✓ Purpose and rationale after each task
- ✓ Brand consistency and organizational benefit included
- ✓ Master governance deck included

READY FOR SUBMISSION AFTER FINAL MANUAL REVIEW OF SPELLING, LOGO PLACEMENT, AND REQUIRED FILE FORMATS.
